

TigerLogic Corporation

Corporate Profile

Introduction

TigerLogic Corporation (Nasdaq: TIGR) has been providing reliable data management and rapid application deployment solutions for end users, independent software vendors and developers of database applications for more than three decades.

TigerLogic's principal business is the design, development, sale and support of infrastructure software that allow customers to create and enhance flexible web-centric business software applications. Since 2001, the Company has been focused on new growth initiatives such as the TigerLogic yolink and TigerLogic XDMS products, while continuing to invest in the development of new updates and releases for our existing Pick and Omnis product lines.

Products Overview

Our product offerings include:

- **TigerLogic[®] yolink:** an internet browser-based application that enhances the search experience of any popular search engine or Web page.
- **TigerLogic XDMS:** XML Data Management Server composed of a native XML database and XQuery engine for high performance, multi-schema XML data management as well as query and retrieval of all types of legacy enterprise data.
- **Pick[®] Universal Databases (D3[®], mvEnterprise[®] and mvBase[®]):** family of powerful multidimensional and hierarchical Pick UDM-based database management systems that are the choice of more than a thousand application developers worldwide.
- **Omnis Studio[®]:** a cross-platform, object-oriented Rapid Application Development (RAD) tool for developing sophisticated thick-client, Web-client or ultra thin-client database applications.
